Question:

Which of the following best defines an ecosystem?

- A) A community of interacting organisms and their physical environment
- B) A group of animals living in the same habitat
- C) The process by which plants produce oxygen
- D) A natural resource used for energy

Answer Key:

Correct answer: A) A community of interacting organisms and their physical environment.

Explanation:

An ecosystem includes both living (biotic) components like plants, animals, and microorganisms, and non-living (abiotic) components such as sunlight, water, and soil. The interactions among these components sustain the system, making option A the most comprehensive and accurate definition.

Common Mistake:

Choosing B) ignores the physical environment and the interactions, while options C) and D) focus on specific processes or resources, not the broader system.

Learning Tip:

Remember, ecosystems are dynamic and complex systems that encompass all living and non-living components interacting as a whole.
