- If 3 moles of hydrogen are reacted, how many moles of water are produced?
- Given a certain mass of oxygen, how much water can be formed?
- How do mole ratios relate to mass ratios?

Providing the Mole Ratios Answer Key for POGIL Activities

Step-by-Step Solution Approach

To effectively utilize the answer key, students should follow these steps:

- Identify the balanced chemical equation.
- Determine the mole ratio from the coefficients.
- Convert given quantities to moles if necessary.
- Apply mole ratios to find unknown quantities.
- Convert moles back to mass or volume if required.

Sample Answer Key for the Example Activity

Question 1: What is the mole ratio of hydrogen to oxygen?

- From the balanced equation $2\text{H}_2 + \text{O}_2 \rightarrow 2\text{H}_2\text{O}$
- Mole ratio $\text{H}_2 : \text{O}_2 = 2 : 1$
- For every 2 moles of H_2 , 1 mole of O_2 is required.

Question 2: If 3 moles of hydrogen are reacted, how many moles of water are produced?

- Using the mole ratio $\text{H}_2 : \text{H}_2\text{O} = 2 : 2$ (or $1 : 1$)
- Set up proportion: $2\text{ mol H}_2 \rightarrow 2\text{ mol H}_2\text{O}$
- Therefore, $3\text{ mol H}_2 \rightarrow (3\text{ mol H}_2 \times 2\text{ mol H}_2\text{O} / 2\text{ mol H}_2) = 3\text{ mol H}_2\text{O}$

Question 3: Given 32 grams of oxygen (O_2), how much water can be formed?

- Convert grams of O_2 to moles: $\text{mol O}_2 = 32\text{ g} / 32\text{ g/mol} = 1\text{ mol}$
- From the balanced equation, 1 mol O_2 produces 2 mol H_2O
- Calculate moles of H_2O : $1\text{ mol O}_2 \times 2\text{ mol H}_2\text{O} / 1\text{ mol O}_2 = 2\text{ mol H}_2\text{O}$
- Convert moles of H_2O to grams: $2\text{ mol} \times 18\text{ g/mol} = 36\text{ g}$

MOLE FRACTION PROBLEMS AND ANSWERS

mole fraction problems and answers are fundamental topics in chemistry, especially when dealing with mixtures and solutions. Understanding how to calculate mole fractions accurately is essential for solving various problems related to solution chemistry, vapor pressure, boiling point elevation, and more. Whether you're a student preparing for exams or a professional working in a laboratory, mastering mole fraction problems can significantly enhance your grasp of solution behavior and composition analysis. This comprehensive guide aims to clarify the concept of mole fractions, provide step-by-step solutions to common problems, and offer practical tips to improve your problem-solving skills.

Understanding Mole Fraction: The Basics

What is Mole Fraction?

Mole fraction is a way of expressing the concentration of a component within a mixture. It is defined as the ratio of the number of moles of a particular component to the total number of moles of all components in the mixture. The formula is:

$$X_A = \frac{n_A}{n_{\text{total}}}$$

$$X_A = \frac{n_A}{n_{\text{total}}}$$

where:

where:

- X_A is the mole fraction of component A,

- n_A is the number of moles of component A,
- n_{total} is the total number of moles of all components.

Since mole fractions are ratios, they are dimensionless quantities and always fall between 0 and 1. The sum of mole fractions of all components in a mixture equals 1:

$$\sum$$

$$\sum X_i = 1$$

$$\sum$$

Significance of Mole Fraction

Mole fractions are crucial because they directly relate to other colligative properties, partial pressures (via Dalton's Law), and are independent of the physical state or volume. They are especially useful in calculating vapor pressures, osmotic pressures, and in thermodynamic calculations involving solutions.

Common Mole Fraction Problems and Step-by-Step Solutions

Problem 1: Calculating Mole Fraction from Masses

Question:

A solution contains 10 g of ethanol ($\text{C}_2\text{H}_5\text{OH}$) and 30 g of water (H_2O). Calculate the mole fraction of ethanol in the solution.

Solution:

Step 1: Find the molar masses.

- Ethanol ($\text{C}_2\text{H}_5\text{OH}$): $(2 \times 12.01 + 6 \times 1.008 + 16.00 = 46.068 \text{ g/mol})$
- Water (H_2O): $(2 \times 1.008 + 16.00 = 18.016 \text{ g/mol})$

Step 2: Calculate moles of each component.

- Moles of ethanol: $\frac{10 \text{ g}}{46.068 \text{ g/mol}} \approx 0.217 \text{ mol}$
- Moles of water: $\frac{30 \text{ g}}{18.016 \text{ g/mol}} \approx 1.666 \text{ mol}$

Step 3: Find total moles in the mixture.

\[

$$n_{\text{total}} = 0.217 + 1.666 = 1.883 \text{ mol}$$

\]

Step 4: Calculate the mole fraction of ethanol.

\[

$$X_{\text{ethanol}} = \frac{0.217}{1.883} \approx 0.115$$

\]

Answer:

The mole fraction of ethanol is approximately 0.115.

Problem 2: Calculating Mole Fraction from Molar Ratios

Question:

In a mixture, the mole ratio of component A to component B is 3:2. What is the mole fraction of component A?

Solution:

Step 1: Assign moles based on ratio.

Let the moles of A be $(3x)$, and B be $(2x)$.

Step 2: Calculate total moles.

\[

$$n_{\text{total}} = 3x + 2x = 5x$$

\]

Step 3: Find mole fraction of A.

\[

$$X_A = \frac{3}{5} = \frac{3}{5} = 0.6$$

\]

Answer:

The mole fraction of component A is 0.6.

Problem 3: Using Mole Fractions to Find Partial Pressure (Dalton's Law)

Question:

A mixture contains 0.4 mole fraction of a gas A, and the total pressure is 1 atm. If the partial pressure of gas A is 0.4 atm, verify whether this matches Dalton's Law.

Solution:

Step 1: Recall Dalton's Law:

\[

$$P_A = X_A \times P_{\text{total}}$$

\]

Step 2: Calculate the partial pressure using the mole fraction.

\[

$$P_A = 0.4 \times 1 \text{ atm} = 0.4 \text{ atm}$$

\]

Step 3: Compare with given partial pressure.

Since the calculated partial pressure matches the given 0.4 atm, the data is consistent.

Answer:

Yes, the partial pressure of gas A aligns with Dalton's Law.

Advanced Problems and Applications

Problem 4: Mixture of Gases at Equilibrium

Question:

A container holds a mixture of gases: 2 mol of oxygen (O₂) and 3 mol of nitrogen (N₂). Calculate the mole fraction of each gas and determine their partial pressures if the total pressure is 10 atm.

Solution:

Step 1: Find total moles.

\[

$$n_{\text{total}} = 2 + 3 = 5 \text{ mol}$$

\]

Step 2: Calculate mole fractions.

- Oxygen:

\[

$$X_{\text{O}_2} = \frac{2}{5} = 0.4$$

\]

- Nitrogen:

\[

$$X_{\text{N}_2} = \frac{3}{5} = 0.6$$

\]

Step 3: Calculate partial pressures.

- $(P_{O_2} = X_{O_2} \times P_{total} = 0.4 \times 10, \text{ atm} = 4, \text{ atm})$
- $(P_{N_2} = 0.6 \times 10, \text{ atm} = 6, \text{ atm})$

Answer:

Mole fraction of O₂ is 0.4, and partial pressure is 4 atm.

Mole fraction of N₂ is 0.6, and partial pressure is 6 atm.

Question What is the definition of mole fraction in a solution? Mole fraction is the ratio of the number of moles of a component to the total number of moles of all components in the mixture, expressed as $X = n_{\text{component}} / n_{\text{total}}$. How do you calculate the mole fraction of a solute in a solution? To calculate the mole fraction of a solute, divide the number of moles of the solute by the total number of moles of all components in the solution: $X_{\text{solute}} = n_{\text{solute}} / (n_{\text{solute}} + n_{\text{solvent}})$. What is the relationship between mole fraction and molarity or molality? Mole fraction is a ratio independent of volume or mass, whereas molarity and molality are concentration measures based on volume and mass, respectively. Mole fraction provides a direct proportion of component moles in a mixture. How can mole fractions be used to determine vapor pressure of a solution? Using Raoult's law, the vapor pressure of a component is proportional to its mole fraction in the liquid phase: $P_{\text{component}} = X_{\text{component}} P_{\text{pure}}$, where P_{pure} is the vapor pressure of the pure component. What are common challenges in solving mole fraction problems? Common challenges include accurately converting between grams and moles, correctly accounting for all components in the mixture, and applying the proper formulas for mole fractions and related properties. Can mole fractions be greater than 1 or less than 0? No, mole fractions always range between 0 and 1, where 0 indicates the component is absent, and 1 indicates it is the only component present.
