These zones are configured via the relay's settings, which are detailed in the manual.

Configuration and Setting Procedures

Step 1: Preliminary Checks

- Verify relay specifications match system parameters
- Ensure proper wiring and connections
- Check power supply and communication interfaces

Step 2: Setting Protection Parameters

- Define zone reach settings based on line length and impedance
- Adjust time delay settings for each zone
- Configure sensitivity thresholds and pickup currents
- Set directional elements if needed

Step 3: Calibration and Testing

- Use test sets or secondary injection to simulate faults
- Confirm relay operation within designated zones
- Adjust settings if necessary to optimize performance

Installation Guidelines

- Mount relay in a suitable panel or cabinet, ensuring adequate ventilation
- Maintain proper grounding and shielding
- Follow manufacturer's instructions for wiring and connections
