Step-by-Step Breakdown of Sample January 2011 Trig Questions

Let's now analyze some representative questions from the January 2011 exam, including solutions with detailed work.

Question 1: Find the exact value of $\sin(75^\circ)$.

Work:

- Recognize that 75° can be expressed as a sum of angles with known sine and cosine values:
 $75^\circ = 45^\circ + 30^\circ$.

- Use the sine addition formula:

$$\sin(A + B) = \sin A \cos B + \cos A \sin B$$

- Substitute known values:

$$\sin 45^\circ = \frac{\sqrt{2}}{2}$$

$$\cos 45^\circ = \frac{\sqrt{2}}{2}$$

$$\sin 30^\circ = \frac{1}{2}$$

$$\cos 30^\circ = \frac{\sqrt{3}}{2}$$

- Calculate:

$$\sin 75^\circ = \sin 45^\circ \cos 30^\circ + \cos 45^\circ \sin 30^\circ$$

$$= \left(\frac{\sqrt{2}}{2}\right) \left(\frac{\sqrt{3}}{2}\right) + \left(\frac{\sqrt{2}}{2}\right) \left(\frac{1}{2}\right)$$

$$= \left(\frac{\sqrt{6}}{4}\right) + \left(\frac{\sqrt{2}}{4}\right)$$

$$= (\sqrt{6} + \sqrt{2}) / 4$$

Answer:

$$\sin(75^\circ) = (\sqrt{6} + \sqrt{2}) / 4$$

Question 2: Solve for θ in the interval $0^\circ \leq \theta < 360^\circ$: $\sin \theta = 0.5$

Work:

- Recall that $\sin \theta = 0.5$ at specific angles:

$\sin \theta = 1/2$ when $\theta = 30^\circ$ or 150° , within the interval 0° to 360° .

- Therefore,

$$\theta = 30^\circ, 150^\circ$$

Answer:

$$\theta = 30^\circ, 150^\circ$$

Question 3: Find the exact value of $\cos 2\theta$ if $\sin \theta = 3/5$ and θ is in the first quadrant.

Work:

- Since $\sin \theta = 3/5$ and θ is in the first quadrant (where all trig functions are positive), find $\cos \theta$:

$$\cos \theta = \sqrt{1 - \sin^2 \theta} = \sqrt{1 - (3/5)^2} = \sqrt{1 - 9/25} = \sqrt{16/25} = 4/5$$

- Use the double-angle formula:

$$\cos 2\theta = 2 \cos^2 \theta - 1$$

$$= 2 (4/5)^2 - 1$$

$$= 2 (16/25) - 1$$

$$= (32/25) - 1$$

$$= (32/25) - (25/25) = 7/25$$

Answer:

$$\cos 2\theta = 7/25$$

Question 4: Graph the function $y = 3 \sin(2x - 30^\circ)$. Describe its amplitude, period, phase shift, and vertical shift.

Work:

- Amplitude: The coefficient in front of sine, 3, signifies an amplitude of 3.

- Period: The period of sine is given by:

Period = $360^\circ / |b|$, where b is the coefficient of x inside the sine.

Here, $b = 2$, so:

$$\text{Period} = 360^\circ / 2 = 180^\circ$$

- Phase shift: The phase shift is given by:

Phase shift = $\pi(c / b)$, where c is the horizontal shift inside the argument (here, $c = \pi 30^\circ$).

$$\text{Phase shift} = \pi(\pi 30^\circ / 2) = 15^\circ$$

- Vertical shift: Since there is no added or subtracted constant outside the sine, the vertical shift is none (centered around $y=0$).

Summary:

- Amplitude: 3
- Period: 180°
- Phase shift: 15° to the right
- Vertical shift: none

Question How do I find the value of a sine function given an angle in a worksheet? To find the sine of an angle, identify the angle measure (in degrees or radians), then use a calculator or

unit circle to determine the sine value. Make sure your calculator is in the correct mode (degrees or radians). What is the best way to evaluate cosine values without a calculator? You can use known special angles (such as 0° , 30° , 45° , 60° , 90°) and their cosine values, or apply the unit circle and symmetry properties of cosine to find the value. How do I find the value of a tangent function on a worksheet? Calculate the tangent by dividing the sine of the angle by the cosine of the angle ($\tan \theta = \sin \theta / \cos \theta$), using known values or calculator functions. What should I do if the worksheet asks for the reciprocal trig functions? Recall that cosecant, secant, and cotangent are reciprocals of sine, cosine, and tangent respectively. Use the basic trig values and take reciprocals as needed. How can I verify my trig function value from a worksheet? Use a calculator for approximate values, or cross-verify using the unit circle, special angle values, or known identities to ensure accuracy. What strategies can help me find trig function values for angles not listed in the worksheet? Use angle addition/subtraction formulas, reference angles, or known identities to find the value; or approximate using a calculator if exact values are not required. Why do some worksheet questions ask for exact trig values, and how do I find them? Exact values are based on special angles where the sine, cosine, and tangent values are known exactly (like 30° , 45° , 60°). Use the unit circle or known identities to find these exact values.
