### 1. Define Thermodynamics.

Answer:

Thermodynamics is the branch of physics that deals with the study of energy, its transformations, and the relationships between heat, work, and other forms of energy within physical systems.

Analysis:

This definition underscores thermodynamics as an energy-centric discipline. It emphasizes the focus on energy transfer processes, which are fundamental to understanding engines, refrigerators, and natural phenomena.

## 2. State the First Law of Thermodynamics.

Answer:

The First Law of Thermodynamics states that energy cannot be created or destroyed; it can only be converted from one form to another. Mathematically,  $\Delta U = Q - W$ , where  $\Delta U$  is the change in internal energy,  $Q$  is heat added to the system, and  $W$  is work done by the system.

Analysis:

This law emphasizes conservation of energy principle. It is foundational for analyzing energy exchanges in thermodynamic processes, highlighting the relationship between heat and work.

Specific heat capacity is the amount of heat required to raise the temperature of one kilogram of a

substance by one degree Celsius (or Kelvin).

Analysis:

It reflects a material's ability to store thermal energy. Specific heats vary for different substances and phases, influencing heat transfer calculations.

## 5. State the Second Law of Thermodynamics.

Answer:

The Second Law of Thermodynamics states that the total entropy of an isolated system can never decrease; it either remains constant for reversible processes or increases for irreversible processes.

Analysis:

This law introduces the concept of entropy, indicating the directionality of natural processes and the inherent irreversibility in real-world phenomena.

## 6. What is a Carnot Cycle?

Answer:

A Carnot cycle is an idealized thermodynamic cycle consisting of two isothermal and two adiabatic processes, representing the maximum possible efficiency that a heat engine can achieve between two temperatures.

Analysis:

It serves as a benchmark for real engines, illustrating the fundamental limits imposed by thermodynamics on efficiency.

## 7. How is work done in an isobaric process?
