Understanding Diabetes Mellitus and Its Nursing Implications

What Is Diabetes Mellitus?

Diabetes mellitus is a chronic metabolic disorder characterized by high blood glucose levels (hyperglycemia) resulting from defects in insulin secretion, insulin action, or both. It is primarily classified into two types:

- Type 1 Diabetes Mellitus: An autoimmune condition where the body's immune system destroys pancreatic beta cells, leading to absolute insulin deficiency.
- Type 2 Diabetes Mellitus: A progressive condition involving insulin resistance coupled with relative insulin deficiency.

Additional forms include gestational diabetes and other specific types caused by genetic mutations, diseases, or medications.

Importance of Nursing Care Plans in Diabetes Management

Nursing care plans are vital for:

- Ensuring systematic assessment and intervention
