- Disclosure requirements in financial statements.

Common Types of Problems in Chapter 13 and How to Approach

Them

Problems in Weygandt's Chapter 13 typically involve journal entries, valuation adjustments, and financial statement presentation. Here's a structured approach to solving these problems:

1. Identifying the Type of Security

- Determine whether the security is debt or equity.
- Classify the security as trading, available-for-sale, or held-to-maturity.
- Decide on the appropriate measurement method based on classification.

2. Recording Purchases

- Debit the investment account at cost.
- Include additional costs like broker's commissions.
- For example:
 - Debit Investment in Securities
 - Credit Cash

3. Recognizing Income and Dividends

- For debt securities:
 - Interest income is recognized using the effective interest method.
- For equity securities:
 - Dividends are recognized as income when declared.
- Journal entries should reflect these transactions accurately.

4. Adjusting for Fair Value (Unrealized Gains and Losses)

- For trading securities:

- Adjust to fair value through the income statement.

- For available-for-sale securities:

- Adjust to fair value through other comprehensive income.

- Record the unrealized gains/losses with entries like:

- Debit or credit Unrealized Gain/Loss
- Credit or debit Fair Value Adjustment

5. Selling Securities

- Record proceeds from sale.
- Remove the investment from books.
- Recognize realized gains or losses:

- Gain if sale proceeds > book value
- Loss if sale proceeds

- Example journal entry:

Debit Cash

Credit Investment in Securities

Credit or Debit Gain or Loss on Sale

Step-by-Step Solutions to Typical Problems

Below are detailed solutions to common problems faced in Chapter 13, illustrating the application of

concepts and journal entries.

Problem 1: Recording the Purchase of a Debt Security

Scenario:

On January 1, a company purchases \$10,000 of trading debt securities with a 6% annual interest rate, broker's commissions of \$50.

Solution:

- Purchase price: \$10,000
- Additional costs: \$50
- Total cost: \$10,050

Journal Entry:

Debit Investment in Trading Securities \$10,050

Credit Cash \$10,050

Problem 2: Recognizing Interest Income Using the Effective Interest Method

Scenario:

On January 1, the company purchased debt securities with a face value of \$10,000 at a discount, yielding an effective interest rate of 8%.

Interest is paid annually on December 31.

Solution:

- Calculate interest revenue for the period:

Carrying amount at start × effective interest rate

- Record interest income and adjust the carrying amount accordingly.

Sample Calculation:

Assuming purchase price was \$9,500, the interest income for the first year:

$$\text{Interest Income} = \$9,500 \times 8\% = \$760$$

Journal Entry:

Debit Investment in Debt Securities \$260

Credit Interest Revenue \$760

(Note: The additional \$260 adjusts the carrying amount toward the face value.)

Problem 3: Adjusting Securities to Fair Value for Available-for-Sale Securities**Scenario:**

At year-end, the fair value of available-for-sale securities is \$12,000, but the book value is \$11,500.

Solution:

- Unrealized gain = \$500
- Record the unrealized gain:

Debit Investment in Available-for-Sale Securities \$500

Credit Unrealized Gain on Securities (OCI) \$500

Note:

- This adjustment does not impact net income but affects other comprehensive income.

Problem 4: Recording the Sale of Securities**Scenario:**

The company sells securities with a book value of \$11,500 for \$12,000.

Solution:

- Recognize cash received: \$12,000
- Remove the investment: debit
- Recognize gain:

Debit Cash \$12,000

Credit Investment in Securities \$11,500

Credit Gain on Sale of Securities \$500
