- **Oxidative System:** Supports sustained, lower-intensity exercise (e.g., long-distance running).

Powers Howley's work emphasizes understanding these systems to tailor exercise intensity and duration, maximizing performance while minimizing fatigue.

Physiological Adaptations to Training

Chronic exercise leads to adaptations that improve efficiency and capacity:

- Increased mitochondrial density enhances aerobic capacity.
- Cardiac hypertrophy improves stroke volume and cardiac output.
- Muscle hypertrophy and fiber type shifts increase strength and power.
- Enhanced capillarization improves oxygen delivery to tissues.

Recognizing these adaptations allows for designing progressive training programs that promote continual improvement.
